SUBURBAN STORE
4049 Taylorsville Rd. at Yorkshire

LOSE'S SURE CROP LAWN SEED—This grass is a carefully blended mixture of high grade Bluegrass, Red Top, Rye Grass, Dutch White Clover and Red Fescues, designed to give you the best lawn, in the quickest time, and under most weather conditions. Ideal for making a quick, permanent, deep green and velvety lawn. \$1.25 lb.; 5 lbs. \$6.00; 10 lbs. \$11.50; 20 lbs. \$22.00.

LOSE'S SURE CROP SHADY LAWN—A carefully blended mixture of grasses especially adapted to growing in shady spots, under trees, or on the shady side of the house. Since trees take a lot of plant food out of the soil it is especially important that you work in at least 4 lbs. of Vigoro, or 6 lbs. of Sheep Manure per 100 sq. ft., and water frequently in the summer. \$1.15 lb.; 5 lbs. \$5.50; 10 lbs. \$10.50; 20 lbs. \$20.00.

LOSE'S COVERQUICK—Ideal for terrace, new lawn, or any area where a quick coverage is most important. Will make a very nice velvety lawn suitable for most any yard. lb. 95c; 5 lbs. \$4.50; 10 lbs. \$8.75.

KENTUCKY BLUE GRASS—King of Grasses—Unequalled for making a beautiful thick compact turf when conditions are favorable. Germination is slow, and if quick lawn is desired should be sown along with faster germinating grasses. Blue grass prefers soil of high fertility, so if your ground is poor be sure to use fertilizer or manure. \$1.50 lb.; 5 lbs. \$7.25; 10 lbs. \$14.00; 20 lbs. \$26.00.

DUTCH WHITE CLOVER—A perennial clover used extensively for lawns in a mixture. \$1.50 lb.; 5 lbs. \$7.25.

RYE GRASS—Unexcelled for rapid growth and immediate effect. Does not make a permanent lawn unless mixed with other grasses. Excellent to give a beautiful green effect all winter. 25c lb.; 5 lbs. \$1.15; 20 lbs. \$4.00.

PERENNIAL RYE GRASS—Fast growing grass well suited for hilly areas. Makes a quick turf—lasts longer than the annual Rye grass. 55c lb.; 5 lbs. \$2.65; 20 lbs. \$10.00.

CREEPING RED FESCUE—Excellent for shade. Thrives on all types of soil, even dry sandy bottom soil. Makes an extremely tight sod of fine needle-like deep green leaves. Is not easily winter-killed and is ideal for use on lawns, golf courses, airports, cemeteries, and playgrounds. 95c lb.; 5 lbs. \$4.50; 10 lbs. \$8.50.

MERION (B27) BLUEGRASS—A superior strain of Bluegrass developed by the Merion Golf Club. It builds a closer Knitted cushion of turf under close mowing than regular blue grass and for this reason will crowd out more weeds and crabgrass. Stays green longer than the regular bluegrass. 1 lb. sows approximately 750 sq. ft. \$5.00 per lb.

BERMUDA GRASS—A very strong growing grass that is native to the South. Although it turns brown after a heavy frost, it grows very rapidly in the Spring and soon crowds out all other grasses. Recommended only where Bluegrass and other more desirable grasses fail. \$1.00 lb.; 5 lbs. \$4.75.

HIGHLAND BENT—A very fine bladed grass which will require extra attention. Subject to Brown Patch. Recommended in mixtures with other grasses. \$1.50 lb.

FERTILIZERS FOR YOUR LAWN

SHEEP MANURE—For a quicker, greener, and more permanent lawn, apply about 6 pounds of SWIFTS sheep manure per 100 square feet. SWIFTS sheep manure is well rotted and weed free, and can be applied before planting, during planting, or after planting the seed with equally excellent results. 5 lbs. 45c; 10 lbs. 75c; 25 lbs. \$1.40; 50 lbs. \$2.30; 100 lbs. \$4.25.

LAWN LIME—Best broadcast early in spring or late in fall at rate of 50 lbs. per 1,000 sq. ft. 50 lb. bag 60c; 100 lbs. \$1.00.

COW MANURE—Gives excellent results when broadcast before or after sowing lawn seed. Will not injure grass at any time. Old Fashioned 50 lbs. \$1.75; 100 lbs. \$3.00—Sterilized, 50 lbs. \$2.30; 100 lbs. \$4.25.

VERTAGREEN—Apply 4 to 6 lbs. per 100 sq. ft. on either new or old established lawns. Always water after fertilizing. 5 lbs. 55c; 10 lbs. 95c; 25 lbs. \$1.70; 50 lbs. \$2.55; 100 lbs. \$4.85.

ABOUT WATERING

SOAK, DON'T SPRINKLE. Your garden needs water when the leaves look wilted in the sun and do not recover freshness over night. **FREQUENT SPRINKLINGS ON THE SURFACE SOIL ARE NOT ONLY OF LITTLE VALUE, BUT MAY BE HARMFUL.**

Except for transplants, try to avoid watering the garden until it really needs water. **WHEN YOU DO WATER, SOAK, DON'T SPRINKLE.** Do a thorough job. The hose or sprinkler should be allowed to run on one spot until water stands on the surface in a pool. After watering, the soil should be moist to a depth of five to six inches. Check this with a spade to be sure.

DO NOT WATER IN THE HEAT OF THE NOON DAY SUN. Watering should be done either early in the morning or late in the evening.

Icicle Radish
